

State: ORISSA
Agriculture Contingency Plan District: BOLANGIR

1.0 District Agriculture profile					
1.1	Agro-Climatic/ Ecological Zone				
	Agro Ecological Sub Region (ICAR)	Gujarat Hills, Dandakaranya & eastern ghats hot moist sub humid eco sub-region (12.1)			
	Agro-Climatic Region (Planning Commission)	Eastern Plateau and hills region (VII)			
	Agro Climatic Zone (NARP)*	West central Table land zone (OR-9)			
	List all the districts falling under the NARP Zone	Debagarh, Bolangir, Sonepur, Bargarh, parts of sambalpur and Jharsuguda			
	Geographical coordinates of district	Latitude	Longitude	Altitude	
		20 ^o 42'08.15 N	83 ^o 28'49.43" E	207 m	
	Name and address of the concerned ZRS/ ZARS/ RARS/ RRS/ RRTTS	RRTTS, Chiplima, sambalpur- 768 026			
	Mention the KVK located in the district	KRISHI VIGYAN KENDRA , Larkipalli farm, Bolangir-767 002			
	Name & address of the nearest Agromet field unit (AMFU, IMD) for agro-advisories in the zone	RRTTS, Chiplima,sambalpur			
1.2	Rainfall	Average (mm)	Normal Rainy days (number)	Normal Onset (specify week and month)	Normal Cessation (specify week and month)
	SW monsoon (June-Sep):	1134.3	49	2nd week of June	2 nd week of September
	NE Monsoon (Oct-Dec):	77.9	5	1 st week of October	1 st week of December
	Winter (Jan-February)	36.4	3		
	Summer (March-May)	41.2	3		
	Annual	1289.8	60		

* If a district falls in two NARP zones, mention the zone in which more than 50% area falls

1.3	Land use pattern of the district (latest statistics)	Geographical area	Cultivable area	Forest area	Land under non-agricultural use	Permanent pastures	Cultivable wasteland	Land under Misc. tree crops and groves	Barren and uncultivable land	Current fallows	Other fallows
	Area ('000 ha)	679	346	154	53	46	18	4	23	22	13

Source: Orissa Agriculture statistics 2008-2009

1.4	Major Soils (Common names)	Area ('000 ha)	Percent (%) of total
	Mixed red and yellow	196.38	30
	Red and black	189.33	29
	Black	101.56	15
	Laterite and lateritic	54.59	9

Source: Soil Conservation Office, Bolangir

1.5	Agricultural land use	Area ('000 ha)	Cropping intensity %
	Net sown area	324	146
	Area sown more than once	148	
	Gross cropped area	472	

Source: Orissa Agriculture statistics 2008-2009

1.6	Irrigation	Area ('000 ha)	Percent (%)		
	Net cultivated area	346	52.66(of geographical area)		
	Net irrigated area	53.92	15.58(of net cultivated area)		
	Gross irrigated area	84.04	12.79(of geographical area)		
	Rainfed area	270	84.39(of net cultivated area)		
	Source of irrigation	Number	Area ('000 ha)	% area	
	Canals	NA	23.31	27.7	
	Tanks	NA	NA	NA	
	Open wells	NA	16.79	20	
	Bore wells	49	NA	NA	
	Lift irrigation	NA	24.47	32.2	
	Other sources	NA	42.98	52	
	Total irrigated area	NA	84.04	NA	
	Pumpsets	457	NA	NA	
	No. of tractors	68	NA	NA	
	Groundwater availability and use	No. of blocks	% area	Quality of water	
	Over exploited	NIL	NA	NA	
	Critical	NIL	NA	NA	
	Semi-critical	NA	NA	NA	
	Safe	NA	NA	NA	
Wastewater availability and use	NA	NA	NA		

	Ground water quality	NA	NA	NA
--	----------------------	----	----	----

*over-exploited: groundwater utilization > 100%; critical: 90-100%; semi-critical: 70-90%; safe: <70%

2.2 Unusual rains (untimely, unseasonal etc) (for both rainfed and irrigated situations)

Condition	Suggested contingency measures			
	Vegetative stage	Flowering stage	Crop maturity stage	Post harvests
Continuous high rainfall in a short span leading to water logging				
Paddy	Drainage	Drainage	Drainage	Transport to a ventilated space & dry in shade
Arhar	Drainage	Drainage	Drainage	Storage against pest & diseases
Cowpea	Drainage	Drainage	Drain age	Transport to a ventilated space & storage against pest & diseases
Horticulture				
Fruits(Mango, Citrus etc)	Provide drainage	Provide drainage	Provide drainage	Early harvesting
Banana, Papaya	Drainage	Drainage	Drainage	
Cucurbit vegetables	Drainage,	Drainage	Drainage	Ensure drainage Harvesting at tender stages
Heavy rainfall with high speed winds in a short span²				

Paddy	Drainage	Drainage	Early harvesting	
Sugarcane	Drainage	Drainage	Drainage	Lodged canes may be harvested for extraction of juice & jiggery
Horticulture				
Banana	Drainage	Drainage	Drainage	
Papaya	Drainage	Drainage	Drainage	
Outbreak of pests and diseases due to unseasonal rains				
Paddy	Spray tricyclazole against blast, ,	Spray tricyclazole against blast, Monocrotophos against stemborer	Malathion spray against Gundhy bug	Sun drying / disinfection of gunny bags with malathion
Arhar	Removal of infested tips to manage leaf webber	Hand picking & destruction of blister beetles	Spray of Ekalux against pod borer	Store in clean godown, disinfection of gunny bags / storage structure with malathion
Blackgram/Greengram	Application of Triazophos against YMV	Application of malathion against Flea beetle	Spray of Nuvan against pod borer	Disinfection of storage structure to manage stored grain pests
Horticulture				
Cucurbit vegetables	Spraying of Ekalux against Red pumpkin beetle, Collection & destruction of eggs/grubs, Soil drenching of COC & streptomycin against wilting	Spraying Endosulfan against leaf eating caterpillars Metalaxyl against Powdery mildew, Carbendazim against leaf spot & blight	Poison baiting with Malathion & Jaggery against fruit fly	Destruction of overripe & infested fruits

2.3 Floods

Condition	Suggested contingency measures			
	Seedling/ nursery stage	Vegetative stage	Reproductive stage	At harvest
Transient water logging/ partial inundation¹				
Paddy	Drainage	Drainage	Drainage	
Maize	Drainage	Drainage	Drainage	Harvest the cobs as soon as possible
Horticulture				
Crop1				
Continuous submergence for more than 2 days	NOT A FEATURE OF THE DISTRICT			
Crop1				
Horticulture				
Crop1				
Sea water intrusion	NOT A FEATURE OF THE DISTRICT			
Crop1				

2.3 Extreme events: Heat wave/ Cold wave/ Frost/ Hailstorm/ Cyclone

Extreme event type	Suggested contingency measures			
	Seedling/ nursery stage	Vegetative stage	Reproductive stage	At harvest
Heat Wave				
Rice, maize semamum	Irrigation as per needed.	Irrigation as per needed.	Irrigation as per needed.	
Horticulture				
Vegetables	Irrigation as per needed.	Irrigation as per needed.	Irrigation as per needed.	
Cold wave	Not prevalent			
Frost	Not prevalent			
Hailstorm	Not prevalent			
Cyclone	Not prevalent			

2.5 Contingent strategies for Livestock, Poultry & Fisheries

2.5.1 Livestock

	Suggested contingency measures		
	Before the event	During the event	After the event
Drought			
Feed and fodder availability	<p>As the district is frequently prone to drought the following practices may be implemented to prevent fodder shortage problem</p> <p>Sowing of cereals (fodder varieties of Sorghum/Bajra) and leguminous crops (Lucerne, Berseem, Horse gram, Cowpea) during rabi under dry land system for fodder production.</p> <p>Motivating the sugarcane farmers to convert green sugarcane tops in to silage by the end of February</p> <p>Preserving the green maize fodder as silage</p> <p>Encourage fodder production with Bajra /sorghum– stylo- Bajra/sorghum on rotation basis and also to cultivate short-term fodder crops like sunhemp</p> <p>Formation of village Disaster Management Committee</p> <p>Capacity building and preparedness of the stakeholders and official staff for the drought/floods</p>	<p>Harvest and use biomass of dried up crops (Paddy, Green gram, Black gram, Maize, cow pea etc.,) material as fodder</p> <p>Use of locally available cheap feed resources like sun flower heads as supplement for feeding of livestock during drought</p> <p>Harvest all the top fodder available (Subabul, Glyricidia, Pipol, Prosopis etc) and feed the LS during drought</p> <p>Concentrate ingredients such as Grains, brans, chunnies & oilseed cakes, low grade grains etc. unfit for human consumption should be procured from Govt. Godowns for feeding as supplement for high productive animals during drought</p> <p>Promotion of Horse gram as contingent crop and harvesting it at vegetative stage as fodder</p> <p>Continuous supplementation of minerals to prevent infertility.</p> <p>Encourage mixing available kitchen waste with dry fodder while feeding to the milch animals</p>	<p>Encourage progressive farmers to grow multi cut fodder crops of sorghum/bajra/maize(UP chari, MP chari, HC-136, HD-2, GAIN T BAJRA, L-74, K-677, Anand/African Tall, Kisan composite, Moti, Manjari, B1-7 on their own lands with input subsidy</p> <p>Supply of quality stem cuttings of Hybrid napier (CO1), paragrass, guinea grass, combo grass well before monsoon</p> <p>Flushing the stock to recoup</p> <p>Replenish the feed and fodder banks</p>

Drinking water	<p>Adopt various water conservation methods at village level to improve the ground water level for adequate water supply.</p> <p>Identification of water resources</p> <p>Desilting of ponds</p> <p>Rain water harvesting and create water bodies/watering points (when water is scarce use only as drinking water for animals)</p> <p>Construction of drinking water tanks in herding places/village junctions/relief camp locations</p> <p>Community drinking water trough can be arranged in shandies /community grazing areas</p>	<p>Adequate supply of drinking water.</p> <p>Restrict wallowing of animals in water bodies/resources</p> <p>Add alum in stagnated water bodies</p>	<p>Watershed management practices shall be promoted to conserve the rainwater. Bleach (0.1%) drinking water / water sources</p> <p>Provide clean drinking water</p>
Health and diseases management	<p>Procure and stock emergency medicines and vaccines for important endemic diseases of the area</p> <p>All the stock must be immunized for endemic diseases of the area</p> <p>Surveillance and disease monitoring network to be established at Joint Director (Animal Husbandry) office in the district</p> <p>Adequate refreshment training on draught management to be given to VAS, Jr.VAS, LI with regard to health & management measures</p> <p>Procure and stock multivitamins & area specific mineral mixture</p>	<p>Carryout deworming to all animals entering into relief camps</p> <p>Identification and quarantine of sick animals</p> <p>Constitution of Rapid Action Veterinary Force</p> <p>Performing ring vaccination (8 km radius) in case of any outbreak</p> <p>Restricting movement of livestock in case of any epidemic</p> <p>Tick control measures be undertaken to prevent tick borne diseases in animals</p> <p>Rescue of sick and injured animals and their treatment</p>	<p>Keep close surveillance on disease outbreak.</p> <p>Undertake the vaccination depending on need</p> <p>Keep the animal houses clean and spray disinfectants Farmers should be advised to breed their milch animals during July-September so that the peak milk production does not coincide with mid summer</p>

		Organize with community, daily lifting of dung from relief camps	
Floods			
	<p>In case of early forewarning (EFW), harvest all the crops (Paddy, Green gram, Black gram, Maize, cow pea etc.) that can be useful as feed/fodder in future (store properly)</p> <p>Protect the dried Dongri grass, sorghum stover etc., from inundation of flood water</p> <p>Keeping sufficient of dry fodder to transport to the flood affected villages</p> <p>Don't allow the animals for grazing if severe floods are forewarned</p> <p>Keep stock of bleaching powder and lime</p> <p>Carry out Butax spray for control of external parasites</p> <p>Procure and stock emergency medicines and vaccines for important endemic diseases of the area</p> <p>All the stock must be immunized for endemic diseases of the area</p> <p>Surveillance and disease monitoring network to be established at Joint Director (Animal Husbandry) office in the district</p> <p>Adequate refreshment training on draught management to be given to VAS, Jr.VAS, LI with regard to health & management measures</p> <p>Identify the Clinical staff and trained paravets and indent for their services as per</p>	<p>Transportation of animals to elevated areas</p> <p>Proper hygiene and sanitation of the animal shed</p> <p>In severe storms, un-tether or let loose the animals</p> <p>Use of unconventional and locally available cheap feed ingredients for feeding of livestock.</p> <p>Avoid soaked and mould infected feeds / fodders to livestock</p> <p>Carryout deworming to all animals entering into relief camps</p> <p>Identification and quarantine of sick animals</p> <p>Constitution of Rapid Action Veterinary Force</p> <p>Performing ring vaccination (8 km radius) in case of any outbreak</p> <p>Restricting movement of livestock in case of any epidemic</p> <p>Emergency outlet establishment for required medicines or feed in each village</p> <p>Spraying of fly repellants in animal sheds</p>	<p>Repair of animal shed</p> <p>Bring back the animals to the shed</p> <p>Cleaning and disinfection of the shed</p> <p>Bleach (0.1%) drinking water / water sources</p> <p>Encouraging farmers to cultivate short-term fodder crops like sunhemp.</p> <p>Deworming with broad spectrum dewormers</p> <p>Proper disposal of the dead animals / carcasses by burning / deep burying (4-8 feet) with lime powder (1kg for small ruminants and 5kg for large ruminants) in pit</p> <p>Drying the harvested crop material and proper storage for use as fodder.</p> <p>Keep close surveillance on disease outbreak.</p>

	<p>schedules</p> <p>Identify the volunteers who can serve in need of emergency</p> <p>Arrangement for transportation of animals from low lying area to safer places and also for rescue animal health workers to get involve in rescue operations</p>		
Cyclone	NA		
Heat wave	<ul style="list-style-type: none"> i) Plantation around the shed ii) H₂O sprinklers / foggers in the shed iii) Application of white reflector paint on the roof iv) Thatched sheds should be provided as a shelter to animal to minimize heat stress 	<p>Allow the animals early in the morning or late in the evening for grazing during heat waves</p> <p>Feed green fodder/silage / concentrates during day time and roughages / hay during night time in case of heat waves</p> <p>Put on the foggers / sprinklers /fans during heat waves in case of high yielders (Jersey/HF crosses)</p> <p>In severe cases, vitamin 'C' and electrolytes should be added in H₂O during heat waves.</p>	<p>Feed the animals as per routine schedule</p> <p>Allow the animals for grazing (normal timings)</p>
Cold wave	<p>Covering all the wire meshed walls / open area with gunny bags/ polyethylene sheets (with a mechanism for lifting during the day time and putting down during night time)</p>	<p>Allow for grazing between 10AM to 3PM during cold waves</p> <p>Add 25-50 ml of edible oil in concentrates and fed to the animal during cold waves</p> <p>Apply / sprinkle lime powder in the animal shed during cold waves to neutralize ammonia accumulation</p>	<p>Feed the animals as per routine schedule</p> <p>Allow the animals for grazing (normal timings)</p>
Insurance	<p>Encouraging insurance of livestock</p>	<p>Listing out the details of the dead animals</p>	<p>Submission for insurance claim and availing insurance benefit</p> <p>Purchase of new productive animals</p>

2.5.2 Poultry

	Suggested contingency measures			Convergence/linkages with ongoing programs, if any
	Before the event	During the event	After the event	
Drought				
Shortage of feed ingredients	Storing of house hold grain like maize, broken rice etc, in to use as feed in case of severe drought	Supplementation only for productive birds with house hold grain Supplementation of shell grit (calcium) for laying birds Culling of weak birds	Supplementation to all survived birds	
Drinking water		Use water sanitizers or offer cool hygienic drinking water		
Health and disease management	Culling of sick birds. Deworming and vaccination against RD and IBD	Mixing of Vit. A,D,E, K and B-complex including vit C in drinking water (5ml in one litre water)	Hygienic and sanitation of poultry house Disposal of dead birds by burning / burying with lime powder in pit	
Floods				
Shortage of feed ingredients	In case of early forewarning of floods, shift the birds to safer place Storing of house hold grain like maize, broken rice, bajra etc,	Use stored feed as supplement Don't allow for scavenging Culling of weak birds	Routine practices are followed Deworming and vaccination against RD	

Drinking water		Use water sanitizers or offer cool hygienic drinking water		
Health and disease management	In case of EFW, add antibiotic powder (Terramycin/Ampicilline/Ampiclox etc., 10g in one litre) in drinking water to prevent any disease outbreak	Prevent water logging surrounding the sheds through proper drainage facility Assure supply of electricity by generator or solar energy or biogas Sprinkle lime powder to prevent ammonia accumulation due to dampness	Sanitation of poultry house Treatment of affected birds Disposal of dead birds by burning / burying with lime powder in pit Disposal of poultry manure to prevent protozoal problem Supplementation of coccidiostats in feed Vaccination against RD	
Cyclone	NA			
Heat wave and cold wave				
<i>Shelter/environment management</i>	<i>Heat wave:</i> Provision of proper shelter with good ventilation	In severe cases, foggers/water sprinklers/wetting of hanged gunny bags should be arranged Don't allow for scavenging during mid day	Routine practices are followed	
	<i>Cold wave:</i> Provision of proper shelter Arrangement for brooding Assure supply of continuous electricity	Close all openings with polythene sheets In severe cases, arrange heaters Don't allow for scavenging during early morning and late evening	Routine practices are followed	

Health and disease management	Deworming and vaccination against RD and fowl pox	Supplementation of house hold grain Provide cool and clean drinking water with electrolytes and vit. C In hot summer, add anti-stress probiotics in drinking water or feed	Routine practices are followed	
--------------------------------------	---	--	--------------------------------	--

2.5.3 Fisheries

	Suggested contingency measures		
	Before the event	During the event	After the event
Drought			
Shallow water in ponds due to insufficient rains/inflow	<ol style="list-style-type: none"> 1. Restricted release of water from reservoir. 2. Supplementary water harvest structures like pond and tanks has to be developed. 3. Renovation and maintenance of existing water harvest structures 	<ol style="list-style-type: none"> 1. Restrict lifting of water for irrigation purpose of crops 2. Catch the stock, market the produce to reduce the density of population in ponds. 	<ol style="list-style-type: none"> 1. Excavate the ponds to increase the depth. 2. Try to release water into the pond if it rains in off-season
Impact of heat & salt load build up in ponds / change in water quality	<ol style="list-style-type: none"> 1. Application of organic manure in culture system 	<ol style="list-style-type: none"> 1. Recharge the ponds with bore well water or water from other sources 	<ol style="list-style-type: none"> 1. Application of organic manure in culture system
Floods			
Inundation with flood waters	<ol style="list-style-type: none"> 1 Storage of sand filled bags for emergency use. 2 Repair and maintenance of bundhs. 	<ol style="list-style-type: none"> 1. netting at gate 2. Evacuation of people to flood shelter areas. 3. Relief operation. 	<ol style="list-style-type: none"> 1. Relief operation will continue. 2. Care of health of affected people 3. Settlement of insurance.

			4. Financial support to other people.
Water contamination & change in BOD	Take appropriate measures to check seepage into pond e.g. Raising bunds to prevent entry of water	Check the water quality & take appropriate action	1. Application of lime 2. Application of Alum. 3. Application of KmnO4
Health and diseases management	Stock preventive medicines, vaccines	Administer medicines through random catch Disinfect water by lime , KMnO4	1. Application of lime and KmnO4. 2. Assessment of the health status of fish and accordingly control measure should be taken.
Cyclone	NOT PREVALENT		
Heat wave and cold wave	NOT PREVALENT
